RE: Wyden-Harkin Amendment to the Senate Farm Bill

Dear Senator,

The organizations signed onto this letter urge you to support the Wyden-Harkin Amendment to the Senate farm bill which provides critical improvements to a new Bioenergy Crop Transition Assistance Program in the farm bill's Energy Title.

Sustainable bioenergy production from agriculture holds substantial promise for promoting rural economic development, reducing dependence on imported fuels, enhancing the environment and reducing greenhouse gases. While the farm bill Energy Title contains several programs for research and development of the next generation of bioenergy refineries, the Bioenergy Crop Transition Assistance Program is the only measure designed to assist farmers and foresters who want to start producing cellulosic bioenergy crops.

The Bioenergy Crop Transition Assistance Program was originally designed to provide incentives to farmers and foresters to plant and grow bioenergy crops in a sustainable manner. Many bioenergy crops - particularly perennial native species - will be grown for production for the first time in regions across the country. The goal of the original measure was to give farmers and foresters financial assistance and incentives to use good conservation measures with new bioenergy crop systems and to generate information that other farmers can use to grow sustainable bioenergy crops.

The current Senate farm bill language, however, will not achieve these original goals. A farmer or forester cannot participate unless there is a formal financial commitment from a biomass energy facility. This prevents farmers and foresters from undertaking trial plantings of bioenergy crops and would exclude bioenergy facilities under development from participating. Adequate conservation goals are missing and funding could be used to support agricultural or forest practices that harm wildlife and destroy native habitat. The limited funds are not targeted to perennial systems which can increase soil quality and carbon sequestration and decrease soil erosion and field run-off.

The Wyden-Harkin Amendment would help ensure that the farm bill's incentives for bioenergy production to increase the nation's energy security and achieve substantial economic gain for rural communities at the same time improve the rural environment and conserve the nation's natural resources. It would help accelerate the challenging transition from traditional row crops to more sustainable perennial feedstocks for bioenergy.

The Amendment would provide modest grant funding for groups of farmers or foresters and local entities to join with the bioenergy sector in conducting feasibility studies for bioenergy crop production. It allows participating farmers and foresters to undertake trial plantings of bioenergy crops at the planning stages for biorefinery development. The Program's limited funding is targeted to perennial crop systems that can increase soil quality and carbon sequestration and decrease erosion and field run-off. The Amendment restores conservation goals to ensure that

funding under this Program does not increase environmental degradation, harm wildlife or destroy native habitat.

The emerging bioenergy sector provides a unique opportunity to create an industry that supports agriculture, environmental goals, energy security, and local economic development. Policies that do not consider all of these issues could fracture the coalition that supports bioenergy production thereby making future policy initiatives all the more difficult.

Thank you for your consideration of our request that you support the Wyden-Harkin Amendment to the Senate farm bill.

Sincerely,
